

Mr. Charles Smisson Jr
State Energy Coordinator
Delaware Energy Office
146 South Governors Avenue
Dover, Delaware 19904

Dear Charlie:

It takes perseverance and great leadership to address the complicated issues involving energy cost, delivery, and consumption.

Our Delaware community has the opportunity to take a leadership role to address the daunting future consumption of energy. Any decision will affect us today and for future generations.

Not taking a bold step is irresponsible, especially when the needs of the Delaware community may be addressed through a sustainable energy utility.

Our company, SolarDock, has been given the opportunity to provide clean energy through solar electric to many customers in Delaware. Companies like AstraZeneca, SAAB, and Habitat for Humanity are all having a great experience with power provided by solar. For example, SAAB has been net metering their electric bill to zero. SolarDock is in the process of delivering over 300kW to GE for solar installations on their roofs. The technology has proven itself, creates good jobs and allows businesses to control costs.

We hope Delaware will take a leadership role and leverage the capabilities of a sustainable utility.

Sincerely,

Scott Johnson
Co-founder & Partner
