Re: Proposed 2% photovoltaic carve out, the doubling of the RPS target by 2019 and the establishment of a SEU.

Dear Governor

Having had the pleasure of working on two significant photovoltaic projects in Delaware recently namely the DuPont Chestnut run installation and the Allen Family Foods project, I would like to lend my voice in support of the identification of a 2% solar carve out, the doubling of the RPS target to 20% by 2019 and the establishment of a Sustainable Energy Utility.

Delaware has a real opportunity to become a major player in sustainable energy development and deployment. It is apparent that many neighboring states are either establishing or enhancing their Renewable Portfolio Standards however, Delaware with its unique characteristics, has an opportunity to grow the existing program into a major benefit for all involved.

I look forward to actively participating in the upcoming valuable market.

Sincerely

Chris Sherring
